Results

- Lightening and illuminating
- Protection and recovery of the skin's DNA
- Antioxidant and anti-aging effect

The action of the product is based on an accelerated inhibition of Tyrosinase, the enzyme that catalyzes the production of melanin in the skin. Casmara has created an exclusive Line, to treat anti-ageing and photoaging. This product range issues related to hyperpigmentation and melasma. It is the first line to inhibit the melanin production in the epidermis, avoiding damaging melanogenesis.

Phenomenal quality professional facial treatment
Nácar Professional Treatment

What is it?

It is a cream and exclusive treatment. Unlike any other product range on the market, it is based on seven powerful lightening ingredients that work on every level of the process of melanogenesis;

- Fights excessive melanin production
- Promotes the elimination of the melanin present
- Lightens the dark melanic areas already present
- Prevents the appearance of prominent areas of melanic appearance of melanic and dark complexion
- Prevents the appearance of melanic areas that develop before the sun is exposed

How does it work?

Casmara’s original formulation contains a combination of lightening, regenerating, repairing and moisturizing ingredients. Seven Lightening ingredients that have been optimally combined to act in every level of the process of melanogenesis;

- Tyrosinase (the enzyme that catalyzes the production of melanin in the skin)
- Lightening skin (Tyrosinase inhibitors in the epidermis)
- Lightening skin by blocking the melanocyte (inhibitors of melanogenesis)
- Lightening skin by inhibiting lightening enzymes (inhibitors of melanogenesis)
- Lightening skin by reducing the production of melanin in the melanocyte (inhibitors of melanogenesis)
- Lightening skin by reducing the production of melanin in the melanocyte (inhibitors of melanogenesis)

What is it?

MELANOSOME
- Extraordinary anti-aging effect.
- Produces a youth-enhancing effect.
- Lightening and illuminating.

IN THE PROCESS OF MELANOGENESIS
1) Screening and synthesis of the lightening active ingredients and blockers
2) Production of the lightening active ingredients and blockers
3) Lightens the dark melanic areas already present
4) Prevents the appearance of prominent melanic areas
5) Prevents the appearance of melanic areas that develop before the sun is exposed
